**Göktekin
Enerji**

Infinite energy of Turkey

GÖKTEKİN GROUP BACKGROUND

While there is no capital or commercial affiliation with Göktekin Enerji, the first flagship company of the family, Göktekin Dış Ticaret, started its operations back in 1979, for the purpose of selling white goods and small home appliances manufactured under the brand name Gosonic. Starting its export operations in 1988, the company abandoned its domestic operations from 2001 onwards and focused exclusively on export operations, becoming one of the most reliable home appliance brands in the Middle East. Reaching an annual mean export value of USD 100 Million, the company became a leader in these markets, owing to its product diversity and a wide dealership and service network.

Our founder Abdullah Göktekin grew his own business in the USA after graduating from two US-universities, majoring in International Trade Management and Administration. In 2014, he went to Erbil as the Iraq Country Manager of Gosonic. Serving in this position for 1,5 years, Abdullah Göktekin left his position in Göktekin Dış Ticaret with the founding of Göktekin Enerji in 2015.

GÖKTEKİN ENERJİ

THROUGH THE YEARS

Our company is an engineering firm founded in 2015 for the purpose of providing EPC (Engineering, Procurement & Construction) services. Spending the year 2016 as a preparatory period working on organizational structuring and strategic planning, we obtained all the relevant technical qualification certificates and quality certificates within the same year. On top of all of that, our company is the first EPC company who earned the right to operate as a consultant by obtaining the "Energy Efficiency Consultant" (EEC) certificate as a result of the training provided by the Ministry of Energy and Natural Resources. Beginning its project operations in 2017 and focusing on the construction of land-based solar power plants, our company first completed the Konya Kulu SPP with an installed capacity of 4.725 kWp and then installed two SPP in Afyon with an installed capacity of 1,069 kWp and started its EPC operations.

In 2018, we completed a 2 MW SPP in Nevşehir and a 6,5 MW SPP in Yozgat with our own resources and became an investor in the sector. Within the same year, we completed different projects for public and private sector investors and reached a total installed capacity of 13 MW. We also became the Turkey distributor of SolarEdge, a leading inverter brand in the Europe and US rooftop SPP markets, and began our commercial product sales operations.

In 2019, in line with our objective to further expand our investments, we installed land-based SPPs with a capacity of 13.700 kWp in Van, 12.414 kWp in Diyarbakır, 11.600 kWp in Osmaniye and 4.000 kWp in Adana, and our SPP investment portfolio reached a total installed capacity of over 50 MW. Within the same year, in Samsun, we installed the 5.2 MW Yeşil Küre Solar Power Plant, which was the third biggest rooftop SPP in Turkey at the time of commissioning, including roof and building reinforcement works. Continuing these achievements, we completed 13 new projects over a total capacity of 50 MW and we had a strong start in the rooftop SPP segment.

In light of the Self Consumption Regulations entering into force in May, we predicted the rapid growth potential of the rooftop SPP market and shaped our organizational structure according to the new market dynamics. In 2020, we set out to establish regional offices throughout Turkey and opened our first office in May in

Istanbul. With the establishment of our Ankara and İzmir offices shortly after, we created a wide service network that covers the Mediterranean, Southeastern Anatolia, Marmara, Central Anatolia and Aegean regions. Thanks to this, we increased our focus on rooftop SPP projects significantly. Although we spent the better part of 2020 under Covid-19 restrictions, we managed to complete 35 projects by the end of the year, most of them being rooftop SPPs, with a total installed capacity approaching 100 MW. 29 of these projects were managed and completed simultaneously. In addition to these efforts, we became the distributor of important panel manufacturers such as Hanwha and HT-SAAE. We completed and commissioned the 24 MW Adilcevaz-Alages, which is our licensed SPP investment, in Bitlis.

Increasing our rate of growth in the sustainable energy sector, we also started developing projects on wind power on top of solar power. By the end of 2020, we commissioned the first turbine for the 49.7 MW Metafor in Bingöl, which was our first wind power plant (WPP) project.

In the early months of 2021, while continuing to focus on rooftop solar (GES) projects, we increased our total wind energy capacity to 83.3 MW with the 33.6 MW Yakağzı Wind Power Plant (RES) in Ağrı. During the same period, we simultaneously managed several other projects, including the 50.4 MW Çerkeş project in Çankırı, the 33.6 MW Karamürsel project in Kocaeli, and the 37.8 MW Hamsi and 4.2 MW Fener projects in Sinop. These efforts increased our wind energy EPC expertise to a total capacity of 209 MW by the end of 2022.

By 2023, in line with our medium-term strategies, we expanded our focus to include biomass energy alongside solar and wind energy. As part of this strategy, we initiated two biomass power plant investments, each with a capacity of 16 MW, in Aksaray and Edirne, totalling 32 MW.

On top of all this, we will also build on our experiences on sustainable energy in Turkey, carrying out foreign renewable energy projects with a total capacity of 1.000 MW, which have already been signed in three different countries as of today. Our long-term goal is to become a global player in the renewable energy sector. In line with this goal, over the course of 5 years, we are planning to generate at least 80% of our revenue from our operations in foreign countries, while also maintaining our position as the leading EPC company in Turkey.

Our company took the number 10 spot in the list for The Fastest Growing Companies in Turkey, which was published in 2022 by the Turkish Union of Chambers and Commodity Exchanges, and also came 444th nationwide and 30th in the energy sector in the list for The 500 Biggest Companies in Turkey, which was published by the Fortune magazine.

Abdullah GÖKTEKİN
Chairman of the Board of Directors

Dear Friends of Renewable Energy,

Climate change has made the transition to renewable energy not just a choice but an urgent global necessity for a sustainable future. Green energy, a key pillar in reducing nations' carbon footprints, supports sustainable economic growth while reshaping the geopolitical landscape of energy policies by reducing reliance on fossil fuels.

Following the oil crisis of the 1970s, countries worldwide sought alternative energy sources to enhance energy security and reduce dependence on external supplies. By the 2000s, renewable energy sources such as solar and wind had gained a prominent position in the energy sector, driven by technological advancements.

As the effects of climate change become increasingly apparent, the importance of renewable energy has emerged as a global priority. Today, renewable energy is widely regarded as a cornerstone of both environmental and economic sustainability, laying the foundation for a cleaner world for future generations.

Solar energy, in addition to its environmental benefits, plays a vital role in fostering industrial growth and driving economic development. Recognising the need for innovative solutions to help industrialists excel in global competition, we established Göktekin Enerji in 2015 to address this challenge. Our mission has always been to lead sustainable projects in the energy sector for the benefit of our country.

In our initial years, we built a solid foundation in the sector by providing EPC (Engineering, Procurement & Construction) services. To date, Göktekin Enerji has successfully completed more than 175 solar power plant projects with a total installed capacity exceeding 451 MW. Additionally, we have made significant contributions to our nation's renewable energy capacity with wind energy projects totalling 209 MW. Guided by the principle of efficiency in energy production, we became the only EPC firm certified by the Ministry of Energy and Natural Resources as an Energy Efficiency Consultant (EVD).

We elevated our expertise in EPC by successfully introducing the EPC-F (Engineering, Procurement, Construction & Financing) model. This approach allows us to manage engineering,

procurement, and construction processes while providing financing support for comprehensive solutions. This not only eases the financial burden on our partners but also enhances our contribution to the nation's energy transition.

By adopting the long-term and cost-effective Build-Operate-Transfer model, we have embraced a distinctive approach in the energy sector. Our services include designing projects, delivering turnkey installations, and managing operational processes to meet companies' electricity consumption needs. Through our innovative solutions, we enhance efficiency in energy production, enabling industrialists to more easily achieve their environmental sustainability goals.

In line with our short- and medium-term strategies, we have also invested in biomass energy alongside solar and wind power to support environmental sustainability. Our two plants in Aksaray and Edirne are projected to meet the annual electricity needs of 90,000 households and prevent 202 million kilograms of greenhouse gas emissions annually. These investments not only support the transition to sustainable energy sources in our country but also promote a circular economy by converting waste into a valuable energy resource.

Strategic partnerships, innovative technologies, and sustainable growth strategies remain our top priorities for achieving long-term success in our industry. In this context, our collaborations with globally renowned companies specialising in energy production and infrastructure solutions have accelerated our projects significantly. These international partnerships not only bolster our financial resources but also provide access to cutting-edge technology and global expertise, allowing us to implement our projects successfully in both local and international markets.

The rapid advancements in renewable energy technology and cost reductions have made projects more profitable in shorter timeframes. At Göktekin Enerji, we help our clients lower their energy costs while achieving their carbon-neutral goals, contributing to a sustainable future.

As we have done so far, we will continue to grow with innovative solutions, working towards a cleaner world and a stronger economy.

OUR AREAS OF ACTIVITY

Turnkey SPP Application (Process Management from A to Z)

-  Investment and Process Consultancy
-  Creating Consumption Analyses
-  Field of Application Survey
-  Production Simulations
-  Investment Feasibility
-  Permits and Bureaucratic Process Management
-  Project Design
-  Optimal Product Supply
-  Implementation and Installation
-  Testing, Commissioning and Acceptance Procedures
-  After Sales Maintenance and Operation
-  Monitoring (Performance Monitoring)

EEC (Energy Efficiency Consultancy)

- Preliminary Survey
- Detailed Survey
- Efficiency-Increasing Project Designs
- Energy Management

Commercial Product Sales

- Turkey Distributor of HT-SAAE Solar Panels
- Turkey Distributor of Solaredge Inverters

Maintenance | Operation Services

WHY GÖKTEKİN ENERJİ?

Successfully completed 178 projects, 451 MW of solar power plants, 209 MW of wind power plants and over 660 MW of EPC experience

2 BES investments with a total capacity of 32 MW

The first and only SPP installer (EPC) that holds the Energy Efficiency Consultancy (EEC) certificate issued by the Ministry of Energy and Natural Resources

Expert and experienced technical and administrative staff, mostly engineers

Product selection and supply from the world's top and leading brands

Production performance guarantee

"Independent Technical Consultant Auditing" throughout the term of application

Process management from A to Z including distinguished roof and building reinforcement services by Göktekin Yapı

All Risk Installation Insurance throughout the term of application

High standards of occupational health and safety

For 2 years after project delivery;

- ✓ Monitoring services (Full-time production and performance monitoring)
- ✓ Periodic maintenance and testing
- ✓ Monthly production and performance reporting

GÖKTEKİN ENERJİ

OPERATION, MAINTENANCE & REPAIR SERVICES

Another one of our service models that will provide added value to your company after the turnkey project design and delivery of your solar power plant, is our operation, maintenance and repair services.

The most important purpose of these services that are provided by a special team consisting of engineers who are experts in

their field, is to ensure that the solar power plants that we install run with maximum efficiency. This allows us to reduce the time required for the return on your SPP investment and prolong its service life.

Our monitoring division within the operation, maintenance and repair team review the critical parameters pertaining to

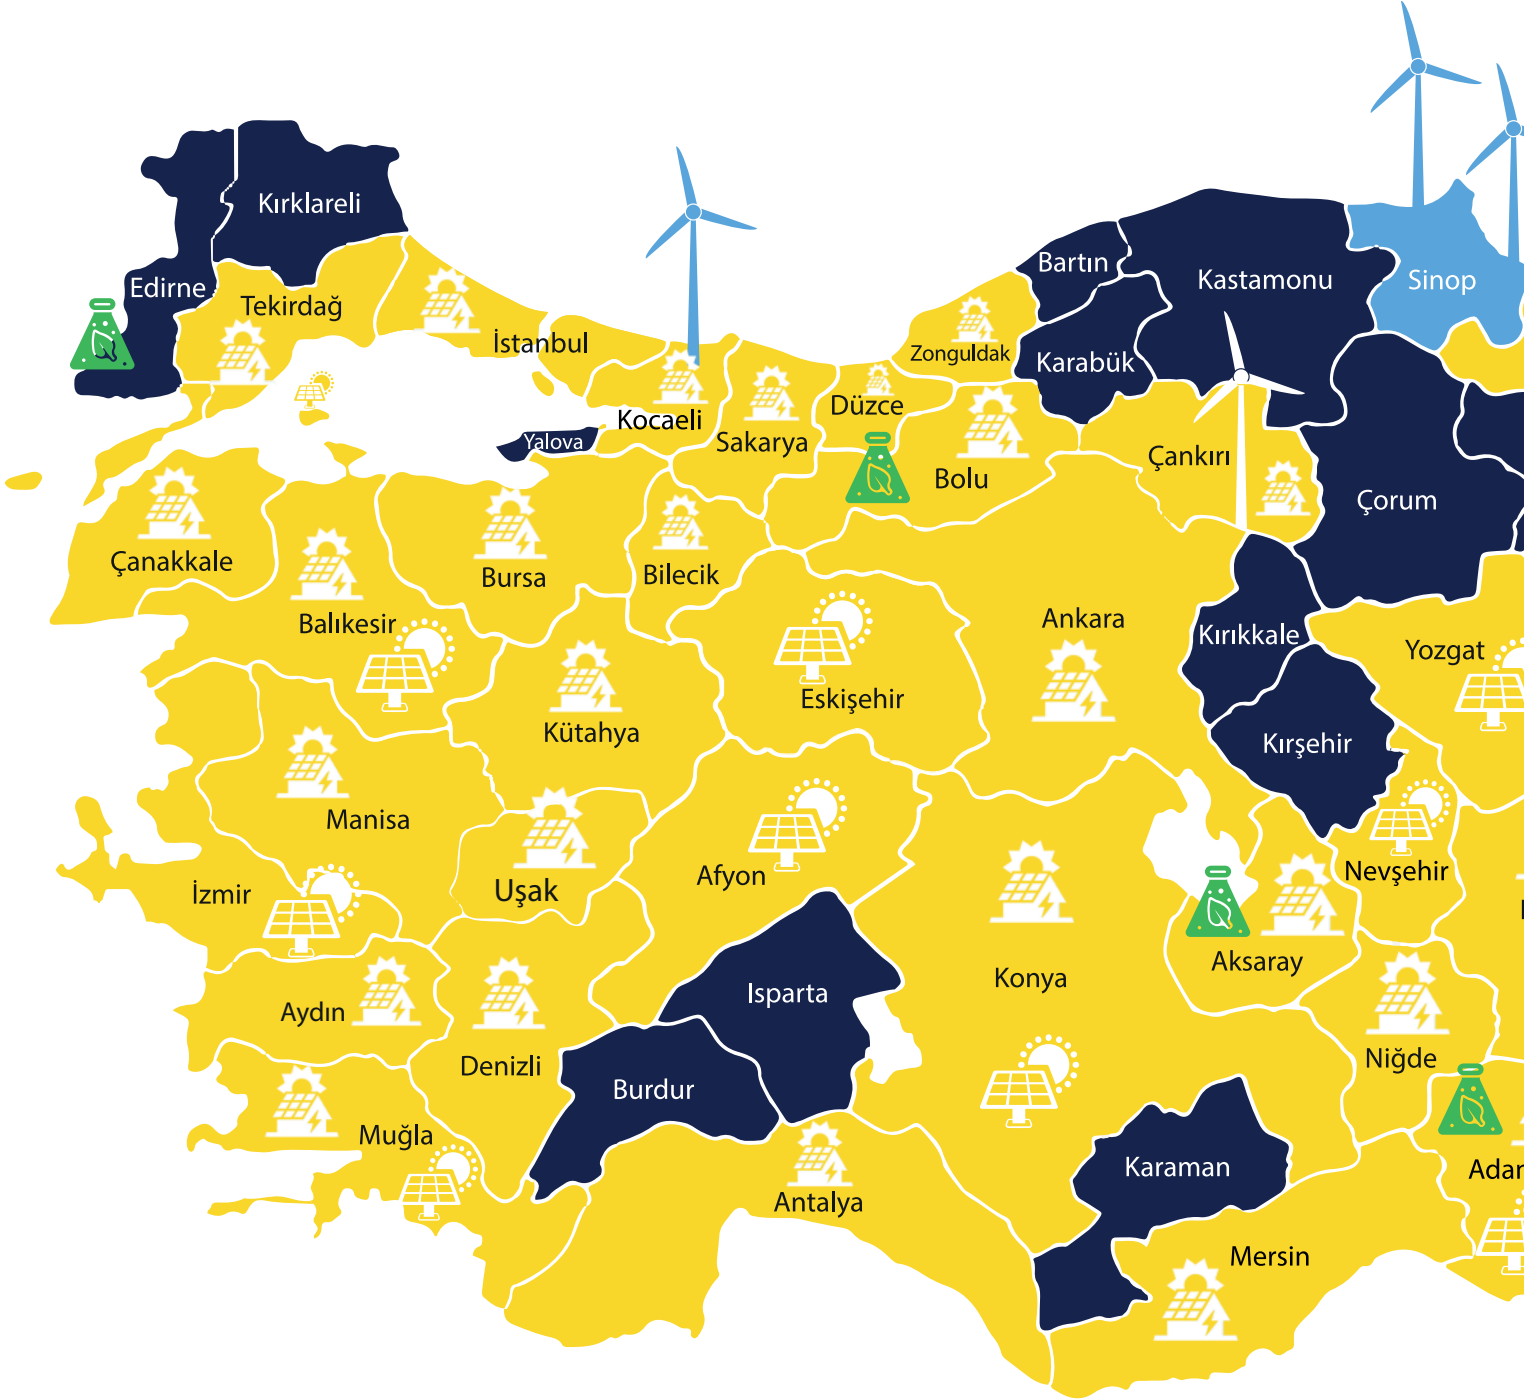

your solar power plant on a continuous basis and ensure that they produce optimal levels of energy. In case of a failure that may affect the efficiency of your plant, the monitoring division identifies the issue instantly.

The necessary response is planned and coordinated from a single central location. With visits from the remote access or

on-site teams, it is ensured that the failure is remedied as soon as possible. All analyses and system data collected with regards to the condition of your SPP investment are shared with you on a regular basis. Your solar power plant is constantly supervised within the framework of this transparent structure and it is ensured that your company has access to clean energy at all times without interruption.
